

Install and Run Guide

This docs is to explain how to install and run the file.

Please follow each steps **after you read the each line of steps first.**

Install and Run

Step1. Download all files from [here](#)

Step2. Extract the zip file in current directory and move into the directory

Step3.

1. For Windows users

- Shift + Right click on the folder "src" then click "Open Command Prompt here"

2. For Mac users

- Run "Terminal" (Command + Space then search Terminal or from Launchpad),
- write "cd " (be noticed there's a space after cd) in Terminal
- Drag the folder "src" to the terminal and press Enter or return key

Step4. Make sure you're in the src directory

- Type "pwd" to check

Step5. Type "bash LW_haus.sh" and Enter

- If you're asked to install Python3, visit [here](#) to install.
- Then try Step5 again

Step5.1. Be noticed that Step5 through executing "bash LW_haus.sh" command line, Any independency will be installed in Virtual environment. It means it's not installed in your OS system but virtual location.

Step6. Enjoy!

Once you opened it, You can start from **Step3** to run the file again.

System and Hardware Requirements

1. Python3
 2. Pypi package Art v5.7 - **installed automatically through LW_haus.sh**
 3. Keyboard and mouse
-

Troubleshooting

T1. If you have error saying 1) Permission denied - Before you start Step5, Type "chmod +x LW_haus.sh" - Try Step5 - If not helped, Please contact to the owner through [GitHub](#)

T2. If you have any error in the game, - Please contact to the owner through [GitHub](#)
